iCOS
Interactive Conference Solution

- Prestigious supplement to Televic Conference Systems

- Enhanced delegate user experience

- Customer specific branding

- Ideal for councils, parliaments and corporate boardrooms

iCOS
Prestigious Conferencing

iCoS is an Interactive Conference System that realizes the fusion of Multimedia, touchscreen interfacing and state-of-the-art Televic Conference Systems.

It is the ideal solution for community councils, national parliaments or corporations that aim at turning their discussion rooms into an intuitive working environment.
Touch screens and fully interactive voting functionality create an intuitive and easy-to-use environment for the conference delegate. An open information exchange format allows exchanging information with 3rd party systems and ensures an easy management of voting agendas, option lists and voting results.

The enhanced voting functionality allows delegates to clearly understand what they are voting about and what their options are. Those options are no longer limited to a yes, no or abstain vote, but various types of voting become possible. And for the delegate that has to vote, the options couldn't be presented any clearer than on a touchscreen, making the voting proceed as smoothly as possible.

Each delegate can switch the user interface into the language of his choice. Agendas can be entered in multiple languages which makes iCOS ideal for multinational environments.

A high degree of flexibility allows the creation of a multimedia conference experience that meets the need of the most demanding applications.

Televic iCOS:
A feature-rich next step in conferencing
- Touchscreen interfacing
- Multi-language user interface and agenda
- Screen distribution
- Advanced voting functionality

Intuitive user experience

Touch screens and user-friendly functionality create an intuitive and easy-to-use environment for the conference delegates.

Users can access speaker information and consult the meeting agenda by simply selecting the relevant topic on-screen.

Each user can choose to see the user interface in his own language, thanks to the multi-language interface.
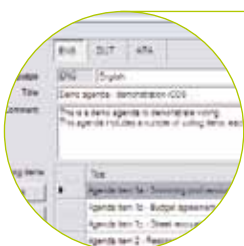

Advanced voting

Adding a touch screen to the conference delegate station opens a full array of new possibilities for voting. No longer limited to 3- or 5-button voting, the system can now handle longer lists of voting options and candidate lists.

The touchscreen display clearly shows the voting options for the delegates at all times

Chairman controls

Via the touchscreen, chairmen can now have an intuitive overview of speakers and request lists. They can now easily interact with the system and activate or deactivate microphones. Furthermore they can control and manage the voting and meeting agenda.

Multi language

The user interface is available in various languages and each delegate can set the language for himself. Languages can be added to meet the needs of international meetings.

Also the meeting and voting agenda can be entered in multiple languages, again selectable per delegate.

Screen distribution

Delegates or chairmen can distribute the content of their screen to all other delegates. Multiple screens can be distributed simultaneously in the system. This allows one or more delegates to distribute a document, presentation or other information on the screens instead of handing them out on paper.

Log-in functionality

Each participant can sign in on the iCOS system with a username and password, or with a chip card.

Delegate mic control

A delegate can activate his microphone using the touch screen button.

Chairman controls

The microphones in the room can be controlled by a chairman via a touch screen and a synoptic - or list view.

Voting

Voting topics and options are clearly visualized. Delegates understand instantly what they are voting for.
Voting results

Voting results can be displayed on the delegate screen, but also on a room display such as a plasma screen.

Screen distribution

Participants can share the presentation on their screens with other delegates in the room.
