

### Controls and Features

- 2 digit LCD display with backlighting
- Up-down buttons for intercom substation selection
- Connect button for intercom substation connection
- Connects to INT 5500 anywhere in the conference room

### Description

The IHS5500 is an intercom station with handset for use between delegates, interpreter booths, secretary, chairman and/or operator.

The intercom function is integrated in the interpreter desks ID5500. In fact there is no additional hardware required for interpreters to establish a communication with any IHS5500 in the system.

The IHS5500 connects to one input and the corresponding output of the INT5500 digital interface.

Communication via the intercom system can be established without intervention of the operator.

### Specifications

Technical Data
